DRY ERASE PRINTER PRESENTATION BOARD

Commissioner for Patents P. O. Box 1450 Alexandria, Virginia 22313-1450

Sir:

#### **DECLARATION UNDER § 1.131**

We declare as follows:

- We are inventors who, on June 26, 2001, filed the above-identified application. At the time of such invention, we were employees of Hewlett-Packard Company.
- 2. Prior to October 6, 2000, the effective date of U.S. Patent No. 6,652,086 to Tomida et al., we conceived of our invention, and diligently worked toward reducing our invention to practice, as demonstrated by the Invention Disclosure attached to this declaration.
- Invention Disclosure 10005234 (which has a descriptive title "DeskJet Dry Erase Presentation Board") is attached hereto as Exhibit 1. As indicated, Invention Disclosure 10005234 was prepared at least as early as July 13, 2000.
- At the time of preparing Exhibit 1, which preceded October 6, 2000, we had conceived of a presentation system including: a writing surface coupled with a frame, the writing surface being adapted to receive erasable ink; and a printer

coupled with the frame, the printer including a printhead configured to print an image

on the writing surface with erasable ink; wherein the printhead is adapted to move

along a traverse rail.

5. We also had conceived of a presentation system including: a

presentation board adapted to display an image for simultaneous viewing by a

plurality of viewers, the presentation board including: a writing surface and a printer

disposed to print non-permanent ink onto the writing surface; a scanner adapted to

scan the writing surface; an electronic image; and a processor adapted to transmit

the electronic image to the printer.

6. We also had conceived of a method for creating an image to be viewed

during a presentation including: obtaining, in electronic form, the image to be viewed;

sending the image to a presentation system including a printer with a printhead

adapted to print erasable ink onto a writing surface; and printing the image on the

writing surface.

7. We also had conceived of a presentation system including: a writing

surface coupled with a frame, the writing surface being adapted to receive erasable

ink; a printer coupled with the frame, the printer including a printhead adapted to

move along a traverse rail, where the printhead is configured to print an image on

the writing surface with erasable ink; and a scanner adapted to scan the writing

surface.

8. We also had conceived of a method for creating an image to be viewed

on a presentation system during a presentation, wherein the presentation system

includes a writing surface, a printer with a printhead adapted to print erasable ink

onto the writing surface, and a scanner configured to scan an image on the writing

surface, the method including: scanning an image on a writing surface; saving the scanned image in electronic form; erasing the image; and printing the scanned image on the writing surface at a later time using the printer.

- 9. Following our conception prior to October 6, 2000, we diligently worked toward reducing our inventions to practice, and on June 26, 2001, filed the present patent application.
- 10. All acts set forth herein and/or relied upon for the purpose of establishing invention prior to October 6, 2000 were carried out in the United States.
- 11. We declare that all statements made herein of our own knowledge are true and all statements made on information and belief are believed to be true. These statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment or both under § 1001 of Title 18 of the United States Code. We understand that such willful false statements may jeopardize the validity of the application or any patent issuing therefrom.

## DeskJet Dry Erase Presentation Board

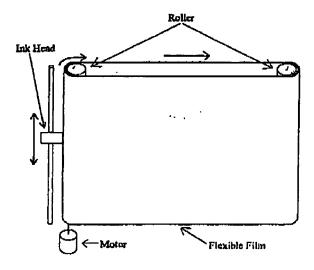

This idea is for a device has a presentation board with an integrated printer. The device comprises of a dry erase board with a dry erase ink printer built into it (possible using DeskJet technology). The device would have an interface connection so images could be printed to the board. The ink used for printing would be erasable so that the image could be modified during a presentation or erased and a new image printed.

A. Prior solutions and their disadvantages (if available, attach copies of product literature, technical articles, patents, etc.)

Prior solutions consist of:

- 1) Using an overhead projector and overhead transparencies or a display screen
- 2) Drawing the images manually on a dry erase board
- 3) Using a computer and a projection system
- B. Problems solved by the invention.
- Allows drawing of repeated or frequency used images (like borders for a table or for company confidential stamps) automatically.
- 2) Prints images on the board from the original source rather then having to draw them manually
- 3) More convenient then using a projector
- C. Advantages of the invention over what has been done before.
- 1) Can be combined with a copy board to get hard copy "originals."
- Can print an electronic image directly on dry erase board (no need to manual draw the image)
- 3) The device can have standard saved images which can be printed on to the board during use (like borders for an Action Item table or for company confidential stamps)
- 4) More legible/professional presentations then hand written
- 5) Design drawings can be printed on the board for discussion/modification
- D. Description of the construction and operation of the invention (include appropriate schematic, block, & timing diagrams; drawings; samples; graphs; flowcharts; computer listings; test results; etc.)

This device consists of a dry crase board and a printing system using dry crase ink. The device would have a processor board and an interface connector(s) for downloading images. The device may also have buttons to interface with the user. The print system for the board may consist of an ink cartridge with a print head which travels in two axis across the board to produce the image. Or the dry crase board can be made of a flexible film and the ink cartridge with the print head moves in one axis as the film rotates in a loop. Either system can be combined with a scanner for the board (copy board type setup) to produce hard copies of the printouts if they are modified.
